IT ENGINEERING

Our expertise in information Technology enables us to adopt the most efficient decisions in the phase of startup and exploitation of your project. We will take up the following roles to help develop your project :

- AMO (superintendent): for your projects carried out in CHINA or in the other ASIAN countries, we ensure their coordination; we take care of the coherence of the supplies and their compatibility. We will coordinate the action of the suppliers by controlling technical quality, by ensuring punctuality allowed by the MOA (owner building) and by minimizing the risks.

- MOAD (delivery partner): we help the building owner define his needs clearly, and we follow up directly with the project superintendent to check the technical feasibility.

We do also Audits of your information systems, Framing of local engineer task groups, intervention for site maintenance and technical support (hardware and software) and Realization of research projects and development in information technologies (web, iphone, android ...)

ANDROID

iPhone

STEEL ENGINEERING

Our Team's Mechanical Engineer and Structural Engineer will manage to produce all steel and stainless steel boxes, frame, and civil structure in small and big quantities for your specific application.

SOURCING

We offer a wide range of practical assistance services to initiate, accelerate and successfully implement your Industrial Sourcing projects in China, including:

- Hosting services: You want to start without delays and costs
- Sourcing Assistance: We help procurement departments in the West to identify, qualify, select and manage Chinese suppliers (Supplier identification, Short list, On-site pre-qualification visits, Price Benchmarking)
- Strategic Quality management: We create specifications and procedures to reduce delay risks and non-conform deliveries.
- Packaging: study and control of OEM and specific packaging
